

## What is claimed is:

1. A finisher for a vehicle having:
  - an elongated body;
  - 5 a plurality of mounting portions that are formed protruding from a rear surface side of the body, mounting members that are mounted on a vehicle body being either held by or fixed to the mounting portions; and
  - a bracket formed in an elongated shape and holding a switch in a vicinity of a center portion in a longitudinal direction thereof,
- 10 wherein the bracket is aligned along a longitudinal direction of the body, and two end portions of the bracket are mounted on the mounting portions in such a manner that a bridge is formed between two adjacent mounting portions from among the plurality of mounting portions, and the switch is operable from a vehicle body exterior side.
- 15 2. The finisher for a vehicle according to claim 1, wherein the bracket and the mounting portions have a positioning and engaging portion that determines a positional relationship between the bracket and the mounting portions.
3. The finisher for a vehicle according to claim 1, wherein, via a through hole formed in the body, the switch is exposed to the outside of a vehicle in a state of being set slightly recessed from an exterior surface of the finisher or so as to be essentially flush with the exterior surface of the finisher.
- 20 4. The finisher for a vehicle according to claim 1, wherein the switch is formed integrally with the bracket by outsert molding.
